

Stroke and PRM

Katharina Stibrant Sunnerhagen

Stroke is a very common disease; one of six in the world will suffer a stroke. Stroke leaves the patient with a large variety of impairments depending on what part of the brain that is damaged. Most persons also have more than one impairment. The combination of impairments as well as the personal factors as well as environmental factors influence the rehabilitation process. Different aspects of rehabilitation will be addressed. The varying needs that are time dependent will also be covered.
